AN ELECTRONIC SIMULATOR FOR CALCULATING HUMP YARDS (Elektronno-modeliruyushchiy Avtomat dlya Raschetov Sortirovochnykh Gorok). Jan 61 [4]p. RTS 1617.

Order from LC or SLA mi\$1.80, ph\$1.80 61-15404

Trans. of Zheleznodorozhnyy Transport (USSR) 1959 [v. 41] no. 8; p. 55.

The simulator solves the differential equation of motion $(d^2s/dt^2) = 10^{-5}g[s(i_r - (w_0 + w_{med}) - w_b)]$, where i_r is the reduced profile of the hump in percent (minus for an up-gradient, plus for a down gradient); w_0 is the amount of basic specific resistance to movement of a waggon in kg/ton; w_{med} is the amount of specific resistance of the medium and wind in kg/ton; g is the acceleration of gravity allowing for the inertia of the rotating masses of a waggon in m/sec²; s is the track in meters; and t is time in seconds.
